

# Chart Review and making corrections utilizing the laptops.

1. Request your charts in the normal manner into your inbox and open.
2. Once you are done with either corrections or reviewing your QA

**DO NOT GO BACK TO YOUR INBOX**

Hit the “Workflow” key at the bottom of the screen.

3. This will bring up a new screen. Please hit the “PCR Reviewed” key to send your chart back into the system.
  - This will also give you a comment box to either simply state “Reviewed” or your initials. Or you can also use the comment box to ask a question or make a statement.

The issue of going back to your inbox and utilizing “Save to Server” will not send your chart back into the system. It will just simply put it back into your Inbox. Hope this helps!
